Positioned to ramp up exploration campaign & expand footprint in West Africa

AOQ Closes A\$250 mm Placement

AOQ recently completed a A\$250 mm placement by issuing 250 mm shares at A\$1.00/sh to a broad range of blue chip institutional investors in Australia, Canada, the UK and the United States. The Placement took place in two tranches, with 193 mm shares being issued in April and 57 mm shares subsequently issued upon the receipt of shareholder approval in late May. AOQ intends to use the capital to drill up to four additional wells (increasing its drilling campaign to six wells), acquire further acreage in offshore West Africa and undertake additional 3D seismic (initially focusing on Block SL-03 offshore Sierra Leone).

Expanded Exploration Campaign - Funded for up to six wells

AOQ's capital raise provides Management with funding to pursue further exploration targets beyond its original drilling program and pick up additional assets in West Africa. Next to Liberia, the Company's Gambian block is the most progressed in terms of prospectivity, having already completed 3D seismic work. Over 20 exploration prospects have been identified, including the Alhamdulilah structure which has a potential resource range of 560-1,000 mmb. Additionally, the recently awarded SL-03 Sierra Leone block requires a 3D program before drilling, however we believe AOQ may wait for well results from its upcoming campaign in Liberia before finalizing its go-forward plans. Management have also indicated its interest to add additional acreage through various applications in West Africa.

Valuation & Recommendation

We are increasing our price target to A\$1.90/sh (from A\$1.80/sh) and reiterating our BUY recommendation following the recent A\$250 mm financing which expands AOQ's twelve month drilling campaign. Our target price now includes the risked upside from three exploration targets (two in Liberia and one in Gambia), as well our estimated Core NAV of A\$0.07/sh following the raise. We continue to expect AOQ's exploration program in Liberia to be the main driver for the share price over the next 12 months and look to the spudding of the first of two back-to-back wells in June/July. AOQ has transformed itself into the largest West African focused oil and gas company with an expansive acreage in Liberia, Gambia, Sierra Leone, Guinea, Senegal and Ghana. We believe Management will use the additional funding to further expand its presence in the region via various acreage applications and further accelerate its exploration program.

AOQ CLOSES A\$250 MM PLACEMENT

African Petroleum recently completed a A\$250 mm placement by issuing 250 mm shares at A\$1.00/sh to a broad range of blue chip institutional investors in Australia, Canada, the UK and the United States. The Placement took place in two tranches, with 193 mm shares being issued in April and 57 mm shares subsequently issued upon the receipt of shareholder approval in late May. Following completion of the Placement, AOQ has 1,597,002,598 shares on issue, and a market capitalization of ~A\$ 1.6 bn.

Management intends to use the capital to drill up to four additional wells (increasing its drilling campaign to six wells), acquire further acreage in offshore West Africa and undertake additional 3D seismic (initially focusing on Block SL-03 offshore Sierra Leone).

ACCELERATED EXPLORATION CAMPAIGN - FUNDED FOR UP TO SIX WELLS

African Petroleum's capital raise provides Management with funding to pursue additional exploration targets beyond its original drilling program outlined in early 2011 as it is now funded for up to six wells. Next to Liberia, African Petroleum's Gambian block is the most progressed in terms of prospectivity. The Alhamdulilah Licence Block A1 and Licence Block A4 span a combined area of 2,668 sqkm (~660,000 acres) offshore, and we believe the acreage has significant exploration potential. More than 20 exploration prospects have been identified including the four way dip closed Alhamdulilah structure, which has an independently evaluated potential resource range of 560-1,000 mmb (estimates provided by Synergy). Prospect evaluation is underway, and Management was originally looking to potentially spud a well in Q4/11. We believe the additional funding will provide financial flexibly required to start securing a rig and aligning a drilling program within the next twelve months.

Additionally, the SL-03 Sierra Leone block requires a 3D program before drilling targets can be refined. The Company does intend to acquire 2D/3D seismic across Block SL-03 which was ratified by the Sierra Leonean Parliament in February 2011, however we believe it may wait for well results from its upcoming campaign in Liberia before finalizing its go-forward plans.

DRILLING IN LIBERIA SLIGHTLY DELAYED

African Petroleum's original spud date in Liberia has slipped slightly from May to June/July as Hess, which was drilling with the Maersk Deliverer rig, is reported to have made a big deep-water discovery resulting in the need to extend drilling. In an earnings call, Hess said that the "Paradise prospect" in the Deepwater Tano Cape Three Points Block in Ghana had so far hit 370 ft of net hydrocarbon pay in two separate intervals. Hess, who has 90% WI in license is carrying the state entity Ghana National Petroleum Corporation for the remaining 10% WI. Paradise was drilled in 6038 ft of water.

The results are preliminary and it is too early to speculate the resource size of the discovery as Hess still has $\sim 1,100$ ft to drill until reaching TD. During the call which was held at the end of April, Hess was drilling ahead at $\sim 15,300$ ft, and at that point estimated an additional two weeks of drilling and logging

Associate: Jessica Lindskog jessica.lindskog@gmpeurope.com +44-20-7647 2826

before reaching target depth. The rig now moves to Ophir Energy (private), Far Limited (FAR AU) and Rocksource (RGT NO) who are expected to spud the Kora Prospect in the Profond block, AGC area, before routing onward to African Petroleum. Far and Rocksource said that they expected the rig to arrive in late May.

Consequently, African Petroleum is looking to start drilling in late June/July on Blocks LB-08 and LB-09 (100% WI, Operator). African Petroleum has identified over 50 prospects and leads which have potential unrisked reserves of 7-15 bnboe. Of these prospects, there are four key clusters in water depths of 800-2000m. The key clusters include one cluster to Block LB-08 (8-1 Horst Area), two clusters to Block LB-09 (Western Fan Area and Central Fan Area in Block LB-08), and the 9-1 Apalis Area cluster straddles both Blocks. Analysis is ongoing to appraise the additional prospects.

VALUATION & RECOMMENDATION

Since our last note, we have rolled forward our 2011 & 2012 estimates and increased our price forecasts. In light of a strong oil pricing environment, we increased our Brent oil price forecast to \$105.00/b in 2011 and 2012 and introduced a long-term forecast of \$100.00/b. Our price deck change has increased our estimate for the NPV per barrel figures in Liberia to \$19.80/b (from \$16.17/b). The net effect of this change does not affect our Core NAV as African Petroleum's drilling portfolio does not include any producing or undeveloped assets. Although we do not categorize any of African Petroleum's resources as undeveloped assets at this time, we believe its upcoming drilling program could quickly prove up both of the blocks potential value, shifting resources into the contingent from the prospective category. The increased per barrel value does increase our exploration targets as each prospect and consequently cluster are now more valuable. However, this increase is slightly diluted due to A\$250 mm raise. The A\$250 mm financing would have increased our cash component of our Core NAV, however, our higher capex assumptions mitigated the change, resulting in a cash value of A\$0.08/sh (previously published cash standing was A\$0.09/sh).

We are increasing our price target to A\$1.90/sh (from A\$1.80/sh) and reiterating our BUY recommendation following the recent A\$250 mm financing which expands AOQ's twelve month drilling campaign. Our target price now includes the risked upside from three exploration targets (two in Liberia and one in Gambia), as well our estimated Core NAV of A\$0.07/sh following the raise.

We assume the two wells in Liberia will target both the Apalis and Central Fan Area clusters. As a complete structure, we include 415 mmb for the Central Fan Area cluster (Block 9) and value it at A\$0.54/sh risked, A\$3.64/sh unrisked. The Apalis Cluster (straddling Block 8 & 9) includes 10 intervals which amount to 286 mmb, which we ascribe a risked value of A\$0.33/sh risked, A\$2.47/sh unrisked.

We believe it is possible that African Petroleum will drill the Alhamdulilah Structure on Block A1/A4 in Gambia later this year as it is now fully funded for up to six wells. We ascribe a value of A\$0.18/sh risked, A\$2.21/sh unrisked to the 560 mmb target.

Associate: Jessica Lindskog jessica.lindskog@gmpeurope.com +44-20-7647 2826

We expect African Petroleum's exploration program in Liberia to be the main driver for the share price over the next 12 months. We also look to news flow from Ophir Energy, Anadarko and Chevron who are all drilling high impact wells in neighboring blocks as positive well results from any of the other deepwater players is expected to be positive for African Petroleum and help de-risk the basin as a whole. In a very short period of time, African Petroleum has transformed itself into the largest West African focused oil and gas company with acreage in Liberia, Gambia, Sierra Leone, Guinea, Senegal and Ghana. The additional funding will help accelerate activity as it is funded for up to six wells in West Africa and adequately positioned to further expand its presence in the region via various acreage applications.

Fully Diluted Shares Outstanding (mm) 1,622.69 AUD:USD Exchange Rate 0.95 CAD:USD Exchange Rate 0.97

Notes Estimates of Reserves and Resources are provided by management and GMP securities

Overall COS = Chance of success after taking all risks into consideration including geological risk, political risk, etc

Value/BOE is calculated from a field model in the specific fiscal regime of the host country after government take, all capex and costs have been removed, and the time value of money is applied

 $Risked \ NAV \ is \ equivalent \ to \ Expected \ Monetary \ Value \ (EMV). \ Risked \ NAV \ = \ (Reward^*C.o.S.) - [Capital \ at \ Risk^*(1-C.o.S.)]$

Fully diluted shares outstanding = shares at period end + options + all dilutive securities

Cost % = the difference (if any) in costs paid versus working interest. Of relevance when farm-outs or farm-ins occur

GMP Securities Europe LLP ("GMP") is authorised by the Financial Services Authority and is a member of the London Stock Exchange.

Company disclosures

- 1 GMP and/or any of its group affiliated companies has, within the previous 12 months, provided paid investment banking services or acted as underwriter to the issuer.
- 2 GMP and/or any of its group affiliated companies is a market maker for the securities of the issuer.
- 3 non-votino
- 4 subordinate-voting
- 5 restricted-voting
- 6 multiple-voting
- 7 the analyst who prepared this report has viewed the material operations of this issuer.
- 8 the analyst who prepared this research report owns this issuer's securities.
- 9 limited voting
- 10 GMP and/or any of its group affiliated companies owns 1% or more of this issuer's securities.
- * The analyst is related to a member of the Board of Directors of [name of company], but that individual has no influence in the preparation of this report.
- **[Other disclosure]

Disclaimer

This report is intended for the sole use of the person for whom it is addressed and is distributed only so far as may be permitted by applicable law. Securities described herein may not be eligible for sale in all jurisdictions or to certain categories of investor. The information contained herein should not be relied upon by any other recipients including private clients. The information contained in this document is provided at the date of publication and is drawn from sources believed to be reliable but has not been independently verified, therefore, the accuracy or completeness of the information is not guaranteed, nor does the information purport to cover all information available on the subject, nor in providing it does GMP Securities Europe LLP ("GMP") or any group company or firm or associate assume any responsibility or liability except to the extent required by applicable law. The information contained in this report may be based on assumptions and different assumptions may produce materially different information. The analyst responsible for preparation of this report may interact with sales and trading personnel and other departments in collating and interpreting market information. Information on which this report is based is retained in accordance with regulatory requirements and may be made available upon request. This report is published for information purposes and is not to be construed as an offer to sell or a solicitation of an offer to buy any securities in any jurisdiction. Past performance is not indicative of future performance. Investors should be aware that the value of investments can rise or fall and need to be aware of these risks in exercising investment decisions. Foreign currency exchange rates can also adversely affect investment returns. GMP Research will initiate, report and cease coverage at the sole discretion of GMP and is under no obligation to update information herein.

GMP and/or affiliated companies or persons may as principal or agent, buy and sell securities mentioned herein, including options, futures or other derivative instruments thereon. Griffiths McBurney Corp., an affiliate of GMP, accepts responsibility for the contents of this research subject to the foregoing. U.S. clients wishing to effect transactions in any security referred to herein should do so through Griffiths McBurney Corp. GMP will provide upon request a statement of its financial condition and a list of the names of its principals and senior officers

Each research analyst and associate research analyst who authored this document and whose name appears herein certifies that (1) the recommendations and opinions expressed in the research report accurately reflect their personal views about any and all of the securities or issuers discussed herein that are within their coverage universe and (2) no part of their compensation was, is or will be, directly or indirectly, related to the provision of specific recommendations or views expressed herein.

GMP Analysts are compensated competitively based on several criteria, including performance assessment criteria based on quality of research. The Analyst compensation pool is comprised of general revenue sources including that from sales and trading and investment banking. GMP policies do not allow the issuer to pay any expenses associated with a visit to its material operations by the Analyst. GMP prohibits any director, officer, employee or Canadian agent of GMP from holding any office in publicly traded companies.

Key

The GMP research recommendation structure consists of the following categories:

FOCUS BUY. Small cap stocks (defined as stocks with less than \$500 million market capitalization) in this category have a total return potential (including dividends payable) of greater than 25% and large cap stocks a greater than 20% total return potential, as well as superior qualitative and timing characteristics.

BUY. These stocks will have 15% or greater (small cap) or 10% or greater (large cap) total return potential.

SPECULATIVE BUY. These stocks will have a 30% or greater total potential return and they will have a speculative component which could be material to the return expectations. HOLD. Small cap stocks ranked Hold will have a total return potential of 0% to 15%; large cap stocks ranked Hold will have a total return potential of 0 to 10%; and stocks that have a speculative component which could be material to the return expectations ranked HOLD will have a total return potential of 0% to 30%. REDUCE. Companies ranked Reduce have a negative potential total return.

FOCUS REDUCE. Companies ranked Focus Reduce have a significant negative potential total return and materially compromised qualitative and timing characteristics. Note: Analysts have discretion within 500 basis points of the upper and lower limit of each rating to determine the recommendation.

All disclosures contained in this document are governed by English law.

United Kingdom: this information is issued for the benefit of persons who qualify as eligible counterparties or professional clients and should be made available only to such persons and is exempt from the restriction on financial promotion in s21 of the Financial Services and Markets Act 2000 in reliance on provision in the Financial Services and Markets Act 2000 (Financial Promotion) Order 2005 particularly Article 19(5) for Investment Professionals and Article 49(2) for entities of prescribed net worth.
